## **Master Programme in Geophysical Engineering**

**FACULTY OF MINING AND PETROLEUM ENGINEERING  
INSTITUT TEKNOLOGI BANDUNG  
2022**

## Table of Contents

<b>Module Handbook Lists .....</b>	<b>4</b>
<b>Master Program of Geophysical Engineering .....</b>	<b>5</b>
1. Advanced Mathematics in Geophysics.....	5
2. Advanced Wave and Field in Geophysics .....	8
3. Advanced Signal Geophysical Analysis .....	11
4. Research Methodology .....	14
5. Fieldwork .....	17
6. Earthquake Seismology .....	20
7. Geodynamics and Seismotectonics .....	23
8. Geohazard and Volcano Physics.....	26
9. Computational Seismology.....	28
10. Acquisition and Processing of Seismic Data .....	31
11. Petroleum System .....	34
12. Advanced Rock Physics.....	37
13. Advanced Seismic Interpretation .....	39
14. Reservoir Geophysics .....	42
15. Advanced Gravity and Magnetic Method .....	45
16. Advanced Geoelectrical Method.....	48
17. Mining Geophysics .....	51
18. Geothermal Exploration .....	54
19. Advanced Engineering and Environmental Geophysics .....	57
20. Advanced Geophysical Inversion Method.....	60
21. Geoscience Summer School .....	63
22. Geomechanics in Geophysics .....	65
23. Exploration and Engineering Seismology .....	68
24. Hidrogeophysics .....	71
25. Geophysical Modeling and Tomography.....	73
26. Individual Project in Geophysics.....	76
27. Microseismic.....	78
28. Advanced Geostatistics .....	80
29. Disaster Mitigation .....	82
30. Exploration Geophysics for Oil and Gas .....	84
31. Marine Geophysics .....	86
32. Capita of Selecta in Geophysics.....	89
33. Advanced Engineering Seismology.....	92

## Module Handbook

34.	Surface Wave Exploration .....	94
35.	Applied GeoEM in Earth Sciences and Technology .....	96
36.	Thesis 1 .....	99
37.	Thesis 2 .....	101
38.	Advanced Electromagnetic Method .....	103

### Master Program of Geophysical Engineering

No	Code	Module Name	Credit
1	TG5111	Advanced Mathematics in Geophysics	2
2	TG5112	Advanced Wave and Field in Geophysics	3
3	TG5114	Advanced Signal Geophysical Analysis	2
4	TG5024	Research Methodology	3
5	TG6232	Fieldwork	2
6	TG5031	Earthquake Seismology	3
7	TG6031	Geodynamics and Seismotectonics	3
8	TG6032	Geohazard and Volcano Physics	3
9	TG5032	Computational Seismology	3
10	TG5122	Acquisition and Processing of Seismic Data	2
11	GL5025	Petroleum System	2
12	TG5225	Advanced Rock Physics	2
13	TG5131 (TG5034)	Advanced Seismic Interpretation	3
14	TG6041	Reservoir Geophysics	3
15	TG5161	Advanced Gravity and Magnetic Method	3
16	TG5162	Advanced Geoelectrical Method	2
17	TG5042	Mining Geophysics	2
18	TG5043	Geothermal Exploration	2
19	TG6044	Advanced Engineering and Environmental Geophysics	2
20	TG5023	Advanced Geophysical Inversion Method	2
21	TG5025	Geoscience Summer School	2
22	TG5033	Geomechanics in Geophysics	2
23	TG5113	Exploration and Engineering Seismology	2
24	TG5133	Hidrogeophysics	2
25	TG5134	Geophysical Modeling and Tomography	2
26	TG5025	Individual Project in Geophysics	2
27	TG5149	Microseismic	2
28	TG5213	Advanced Geostatistics	2
29	TG5232	Disaster Mitigation	2
30	TG5235	Exploration Geophysics for Oil and Gas	2
31	TG6142	Marine Geophysics	2
32	TG6142	Capita of Selecta in Geophysics	2
33	TG6243	Advanced Engineering Seismology	2
34	TG6244	Surface Wave Exploration	2
35	TG5011	Applied GeoEM in Earth Sciences and Technology	2
36	TG6091	Thesis 1	4
37	TG6092	Thesis 2	4
38	TG5264	Advanced Electromagnetic Method	2

## Master Program of Geophysical Engineering

### 1. Advanced Mathematics in Geophysics

Module designation	Advanced Mathematics in Geophysics															
Module level	Master															
Code, if applicable	TG5111															
Sub-heading, if applicable:	-															
Courses included in the module, if applicable:																
Semester(s) in which module is taught	First Semester / first Year															
Module coordinator(s)	Prof.Dr. Wawan Gunawan A. Kadir, MS															
Lecturer(s)	Prof.Dr. Wawan Gunawan A. Kadir, MS															
Language	Bahasa Indonesia															
Relation to curriculum	Major Subject / Compulsory Course															
Type of teaching, contact hours	<table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 80%;">           Class lectures            Lecturer teaches students in class. There will be pop quizzes, task, or homework in some classes. Lecturer presents course material using media such as slide in LCD projector and whiteboard.         </td> <td style="width: 20%; text-align: center; vertical-align: middle;">√</td> </tr> <tr> <td>           Presentation            Students present course materials in front of class using slide in LCD projector, followed by discussion session. After presentation, they make report what they present before.         </td> <td style="text-align: center; vertical-align: middle;">√</td> </tr> <tr> <td>           Tutorial session            Lecturer gives students some problem beforehand. In class students explain how to solve the problem in groups. Lecturer checks how they solve the problem in turns.         </td> <td style="text-align: center; vertical-align: middle;">√</td> </tr> <tr> <td>           Class project and discussion            Lecturer gives students a project which related to current issues and course material.         </td> <td style="text-align: center; vertical-align: middle;">√</td> </tr> <tr> <td>           Supervision and consultation            This activity is continuation of class project. Students consults problem which they face and discuss together how to solve the problem.         </td> <td style="text-align: center; vertical-align: middle;">√</td> </tr> <tr> <td>           Practical or experimental laboratory work            Students do practical or experimental in the laboratory according to practical module. Firstly, laboratory assistant tell main idea of practical or experimental. They do the practical afterwards.         </td> <td style="text-align: center; vertical-align: middle;">-</td> </tr> <tr> <td>           Field trip            Visit field area or company which is related to course material.         </td> <td style="text-align: center; vertical-align: middle;">-</td> </tr> </table>		Class lectures Lecturer teaches students in class. There will be pop quizzes, task, or homework in some classes. Lecturer presents course material using media such as slide in LCD projector and whiteboard.	√	Presentation Students present course materials in front of class using slide in LCD projector, followed by discussion session. After presentation, they make report what they present before.	√	Tutorial session Lecturer gives students some problem beforehand. In class students explain how to solve the problem in groups. Lecturer checks how they solve the problem in turns.	√	Class project and discussion Lecturer gives students a project which related to current issues and course material.	√	Supervision and consultation This activity is continuation of class project. Students consults problem which they face and discuss together how to solve the problem.	√	Practical or experimental laboratory work Students do practical or experimental in the laboratory according to practical module. Firstly, laboratory assistant tell main idea of practical or experimental. They do the practical afterwards.	-	Field trip Visit field area or company which is related to course material.	-

Tutorial session Lecturer gives students some problem beforehand. In class students explain how to solve the problem in groups. Lecturer checks how they solve the problem in turns.	√															
Class project and discussion Lecturer gives students a project which related to current issues and course material.	√															
Supervision and consultation This activity is continuation of class project. Students consults problem which they face and discuss together how to solve the problem.	√															
Practical or experimental laboratory work Students do practical or experimental in the laboratory according to practical module. Firstly, laboratory assistant tell main idea of practical or experimental. They do the practical afterwards.	-															
Field trip Visit field area or company which is related to course material.	-															

## Module Handbook

Workload	Class lectures	2 hours	
	Tutorial session	1 hour	
	Supervision and consultation	1 hour	
	Practical or experimental laboratory work	-	
	Individual studies	6 hours	
	Total workload per week	10 hours	
	Presentation	2 hours	
	Class project	38 hours	
	Field trip	-	
	Total workload per semester	160 hours	
Credit points	2		
Requirements prerequisites			
Learning Goals			
	Knowledge	Skill	Competence
	<ul style="list-style-type: none"> <li>• Understand basic concept of the Mathematic equations that equations that will be applied on geophysical methods.</li> <li>• Understand power series and its expanding in some mathematic equations that can be applied on geophysical methods.</li> <li>• Understand the concept of complex number and its solution in rectangular and polar coordinate systems.</li> <li>• Understand basic concept of some special functions and its background used on geophysical methods.</li> <li>• Understand expanding power series and complex number on Fourier and Laplace transform</li> <li>• Understand basic concept of convolution and its relationship with Fourier-Laplace transforms.</li> </ul>	<ul style="list-style-type: none"> <li>• Able to apply expanding Powers series real harmonic and complex harmonic on geophysical problem.</li> <li>• Understand to apply Euler's equation on Fourier and Laplace transformation.</li> <li>• Familiar in application of Delta and step functions for defining subsurface (interior of the earth) on geophysical data, and its response on geophysical data.</li> <li>• Able to apply Fourier and Laplace transforms, and convolution on geophysical data.</li> </ul>	<ul style="list-style-type: none"> <li>• Take possession of capability for problem solving in geophysical method using expanding function of power series real and complex harmonic oscillation.</li> <li>• Capable in application of Delta and step functions for defining subsurface (interior of the earth) on geophysical data, and its response on geophysical data.</li> <li>• Capability in application of Fourier and Laplace transforms, convolution on geophysical data analysis.</li> </ul>
Content	<p>Introduction, Infinite Series, definition of Power Series and its convergence, extent of function by power series, definition of Complex Number, argand diagram, complex number in polar coordinate, complex infinite series, application of Series and Complex Number in Geophysical methods. Fourier series, finite Fourier series, Fourier integral, Fourier transform, convolution, application in geophysics, Laplace Transform, generalized Fourier transform, laplace transform of delta function, convolution and laplace transform, strain in a inelastic solid, seismometer, Wave Equation, vibration of string, Helmholtz eq., solution in cylindrical and polar coordinate system</p>		

Module Handbook

Study and examination requirements and forms of examination	Midterm test	√	equal
	Final Test	√	
	Presentation, quizzes, homework	√	
	Laboratory work	-	
Media employed	Slides, beamer, boards, appropriate software, online communication, internet, exercises etc.

Content	<p>The topics on the subject are focused into the following subtopics: fundamental concept of wave on geophysics, Green function, Fourier Series, Fourier integral, discrete spectral analysis, Vibration, Acoustic wave, Elastic waves; Compressional wave, shear waves, derivative of the elastic wave equation, boundary condition, reflection and transmission coefficient, Reflection in term of convolution, Fluid-solid boundary, Material symmetry, isotropic and anisotropic media, Hamiltonian's rays equation, Lagrangian equation, Christoffel equation, Euler equation, Fermat principle, and Ray parameter. Field equation, potential, loop and mutual induction on magnetic field, scale theorem on uniform field, multiple, transient, induced polarization theorem, electric induction models, electric polarization POTENTIAL FIELD: Solution of potential field equation. Laplace, Poisson, and diffusion equation. GRAVITY POTENTIAL: gravity potential field analysis, gravity field of the earth. MAGNETIC POTENTIAL: magnetic dipole field, magnetic field of the earth, magnetic anomalies</p>

## Module Handbook

Workload	Class lectures	2 hours
	Tutorial session	1 hours
	Supervision and consultation	2 hours
	Practical or experimental laboratory work	1 hours
	Individual studies	4 hours
	Total workload per week	10 hours
	Presentation	5 hours
	Class project	15 hours
	Field trip	50 hours
	Total workload per semester	160 hours
Credit points	2	
Requirements prerequisites	Advanced Geophysical Mathematics (Taken Simultaneously) Waves and Terrain in Geophysics (Taken Simultaneously)	
<b>Learning Goals</b>		
Knowledge	Skill	Competence
<ul style="list-style-type: none"> <li>• Understand the importance of geological information and geological observation in geophysical works.</li> <li>• Understand the principles and methodologies in general geophysical methods (gravity, magnetic, refraction seismology, geoelectricity, GPR (ground penetrating RADAR), EM methods).</li> <li>• Understand the importance of combined methods in geophysical exploration.</li> <li>• Understand the basic elements in designing geophysical surveys.</li> </ul>	<ul style="list-style-type: none"> <li>• Having field experience in geological and geophysical survey.</li> <li>• Able to conduct basic geological survey that include field observation, data processing and producing basic geological map.</li> <li>• Able to design simple geophysical survey by considering the availability of manpower, instruments, logistics, transports etc.</li> <li>• Able to operate basic geophysical instruments in the field including simple trouble shooting</li> <li>• Able to handle and process data generated by geological and geophysical surveys.</li> <li>• Able to make simple interpretation on the results of geophysical surveys.</li> <li>• Able to communicate his/her own finding through oral presentation as well as through written report.</li> <li>• Able to work in a team in the stressful field environment.</li> </ul>	<ul style="list-style-type: none"> <li>• Confidence in leading a simple geophysical survey.</li> <li>• Confidence in becoming part of large geophysical survey in charge a specific task.</li> <li>• Willingness to learn more about field geophysics.</li> </ul>

## Module Handbook

Content	In this course, the knowledge on how to make a geological and geophysical surveys will be given. The course includes: exploration concept, planning, geological observation, geological mapping, data acquisition, processing and interpretation. Several geophysical method will be applied on the field, namely: refraction seismic, gravity, magnetic, geoelectrical, and Ground Penetrating Radar

Content	<p>The topics subject are focused into the following subtopics : fundamental concept of reflection seismic its application of subsurface image reconstruction for exploration and exploitation. 2D and 3-D seismic data acquisition and design. Standard processing: geometry setting and formatting, pre-processing, NMO and velocity analysis, migration and filtering. Advance seismic data processing: effect anisotropy in the velocity analysis, velocity analysis and modeling, pre-stack depth migration (PSDM), influence of attenuation in the seismic data and its correction, Converted waves and 3C-processing. Broadband Seismic, Vertical Seismic Profiling, Crosshole Seismic and New Tecnologies.</p>

Knowledge	Skill	Competence
<ul style="list-style-type: none"> <li>Geothermal system and inter-disciplinary context of geothermal exploration</li> <li>Geophysical signatures of a geothermal prospect</li> <li>Exploration strategy in general and geophysics in particular</li> <li>The role of geophysical methods in geothermal exploration</li> <li>Conceptual model of geothermal prospect</li> <li>Case studies of well-known geothermal fields</li> </ul>	<ul style="list-style-type: none"> <li>Elaboration of relationship between geothermal phenomena, surface manifestations etc. with regional geological setting</li> <li>Design of geophysical survey both for preliminary and advanced surveys</li> <li>Geophysical data processing and modelling</li> <li>Interpretation of geophysical data and models</li> </ul>	<ul style="list-style-type: none"> <li>Take possession of Identification of a geothermal prospect from desk study of available data</li> <li>Planning and managing geophysical survey campaign, at least conceptually, given existing preliminary data</li> <li>Integration of geophysical survey results both for preliminary and advanced stage of geothermal exploration</li> <li>Building conceptual model of geothermal prospect</li> </ul>

## Module Handbook

Content	Elements of a geothermal system, types of geothermal system, Brief review of geology and geochemistry of geothermal system. General exploration strategy (reconnaissance survey, detailed survey) and development. Geophysical signatures of a geothermal prospect: gross structure, resistivity and magnetic property of cap rocks, density of magmatic heat sources, thermal fluid flow, seismicity of hydrothermal activities. Review of geophysical exploration methods: gravity, magnetics, geo-electrics (Schlumberger, Mise-a-la-masse), magnetotellurics (MT, including CSAMT and transient EM), Self-Potential (SP), micro-seismics. Conceptual model, resource and reserve estimations. Discussion on case studies of geothermal exploration

Presentation Students present course materials in front of class using slide in LCD projector, followed by discussion session. After presentation, they make report what they present before.	-															
Tutorial session Lecturer gives students some problem beforehand. In class students explain how to solve the problem in groups. Lecturer checks how they solve the problem in turns.	√															
Class project and discussion Lecturer gives students a project which related to current issues and course material.	√															
Supervision and consultation This activity is continuation of class project. Students consults problem which they face and discuss together how to solve the problem.	√															
Practical or experimental laboratory work Students do practical or experimental in the laboratory according to practical module. Firstly, laboratory assistant tell main idea of practical or experimental. They do the practical afterwards.	-															
Field trip Visit field area or company which is related to course material.	-

Content	<p>This 10-days program offers a comprehensive introduction to the subject of petroleum geoscience – especially reservoirs, resources, reserves, and basic seismic and rock physics. The program will involve several excursions to Tangkuban Parahu volcano, Kamojang Geothermal field, and Kamojang craters. Cultural and social activities are included in the program. This program is suitable for the undergraduate students who have had some exposure to geoscience</p>

Content	<p>1. Introduction: The interplay between earth stresses, pressures, mechanical properties, and the geometry the act upon; 2. Stress and strain: the stress tensor, the strain tensor, the linear stress-strain relationship; 3. Rock failures: introduction to rock experiment, elastic and plastic material, failure criterion, fracture propagation; 4. Sediment compaction and stress state in the earth: Vertical stress, Pore pressure and sediment compaction, estimation of Minimum and Maximum horizontal stress; 5. Pore pressure and seismic: Pore pressure estimation from velocity, relations of velocity versus effective stress; 6. Wellbore stability: Stress change near a borehole, compressional and tensile failures on the borehole wall; 7. Geotechnical aspect of rock mechanics: tunnelling, land slide, and underground mining activities. 8. Seismic anisotropy of shales: relation of shale anisotropy to microstructure, clay mineral anisotropy; 9. Student projects: wellbore stability, and seismic data analysis</p>

	<p><b>Knowledge</b></p> <ul style="list-style-type: none"> <li>• Knowledge about the application of reflection seismic methods in oil and gas exploration specifically evaluation of leads and prospects</li> <li>• Knowledge of evaluation and development of oil and gas fields.</li> </ul>	<p><b>Skill</b></p> <ul style="list-style-type: none"> <li>• Understand the acquisition technology, survey design, processing and interpretation of seismic reflection data</li> <li>• Interpret the sequence analysis and seismic facies, depositional environmental analysis, system tract analysis)</li> </ul>	<p><b>Competence</b></p> <ul style="list-style-type: none"> <li>• Understand some useful data processing methods and associated linear algebra which are transferable to other fields/applications.</li> <li>• Understand the concept of value of information.</li> <li>• Able to present orally and professionally all of the above topics at research level.</li> </ul>												
Content	<p>This course provides knowledge about the application of reflection seismic methods in oil and gas exploration specifically evaluation of leads and prospects as well as evaluation and development of oil and gas fields. In this course we discuss acquisition technology, survey design, processing and interpretation of seismic reflection data (sequence analysis and seismic facies, depositional environmental analysis, system tract analysis), and modeling (seismic inversion) in the form of integrated studies. This lecture is project based. Each project has a specific objective in accordance with the stages of oil and gas exploration.</p>

	<ul style="list-style-type: none"> <li>Understand the concepts and processing step of geotomography imaging technology</li> <li>Understand the state of the art of the geotomography imaging technology</li> <li>Understand resolution test of tomographic inversion</li> <li>Understand application of geotomography</li> </ul>	<ul style="list-style-type: none"> <li>Able to create program code of ray tracing from source to receiver</li> <li>Able to determine mathematical equation of delay time tomography</li> <li>Able to solve matrix equation of delay time tomography</li> <li>Familiar in delay time tomographic inversion</li> <li>Familiar in resolution test of tomographic inversion</li> <li>Familiar in application of geotomography</li> </ul>	<ul style="list-style-type: none"> <li>Possesses in basic concepts of seismic geotomography technology</li> <li>Familiar in data acquisition of geotomography</li> <li>Able to implement tomography in imaging the subsurface condition</li> </ul>
Content	The topics subject are focused into the following subtopics: recent development of tomography and its application of subsurface image reconstruction on multi-scale problem, data acquisition, step reconstruction of image, parameterization model, raytracing methodology, determining matrix of seismic tomography, tomographic inversion, damping application, resolution test and interpretation. This lecture emphasizes the recent development of tomography in earth science

### 30. Exploration Geophysics for Oil and Gas

Module designation	Exploration Geophysics for oil and gas															
Module level	Master															
Code, if applicable	TG5235															
Sub-heading, if applicable:	-															
Courses included in the module, if applicable:																
Semester(s) in which module is taught	Second Semester / first Year															
Module coordinator(s)	Dr. rer. nat. R. Mohammad Rachmat Sule, S.T, M.T.															
Lecturer(s)	Dr. rer. nat. R. Mohammad Rachmat Sule, S.T, M.T.															
Language	Bahasa Indonesia															
Relation to curriculum	Elective Subject / Elective Course															
Type of teaching, contact hours	<table border="1"> <tr> <td>Class lectures Lecturer teaches students in class. There will be pop quizzes, task, or homework in some classes. Lecturer presents course material using media such as slide in LCD projector and whiteboard.</td> <td>√</td> </tr> <tr> <td>Presentation Students present course materials in front of class using slide in LCD projector, followed by discussion session. After presentation, they make report what they present before.</td> <td>-</td> </tr> <tr> <td>Tutorial session Lecturer gives students some problem beforehand. In class students explain how to solve the problem in groups. Lecturer checks how they solve the problem in turns.</td> <td>-</td> </tr> <tr> <td>Class project and discussion Lecturer gives students a project which related to current issues and course material.</td> <td>-</td> </tr> <tr> <td>Supervision and consultation This activity is continuation of class project. Students consults problem which they face and discuss together how to solve the problem.</td> <td>-</td> </tr> <tr> <td>Practical or experimental laboratory work Students do practical or experimental in the laboratory according to practical module. Firstly, laboratory assistant tell main idea of practical or experimental. They do the practical afterwards.</td> <td>-</td> </tr> <tr> <td>Field trip Visit field area or company which is related to course material.</td> <td>-</td> </tr> </table>		Class lectures Lecturer teaches students in class. There will be pop quizzes, task, or homework in some classes. Lecturer presents course material using media such as slide in LCD projector and whiteboard.	√	Presentation Students present course materials in front of class using slide in LCD projector, followed by discussion session. After presentation, they make report what they present before.	-	Tutorial session Lecturer gives students some problem beforehand. In class students explain how to solve the problem in groups. Lecturer checks how they solve the problem in turns.	-	Class project and discussion Lecturer gives students a project which related to current issues and course material.	-	Supervision and consultation This activity is continuation of class project. Students consults problem which they face and discuss together how to solve the problem.	-	Practical or experimental laboratory work Students do practical or experimental in the laboratory according to practical module. Firstly, laboratory assistant tell main idea of practical or experimental. They do the practical afterwards.	-	Field trip Visit field area or company which is related to course material.	-

Content	This course explains all geophysical methods used in the oil and gas exploration, except reflection seismic method. In the beginning, exploration concept and the importance of geophysical methods integration will be given. Explanation about the theory, data acquisition, data processing and data interpretation will be taught for each method. Several case studies will be given in order to increase the inportance and understanding of each method. At the end of the course, each student is expected to give a presentation.

Supervision and consultation This activity is continuation of class project. Students consults problem which they face and discuss together how to solve the problem.	√															
Practical or experimental laboratory work Students do practical or experimental in the laboratory according to practical module. Firstly, laboratory assistant tell main idea of practical or experimental. They do the practical afterwards.	-															
Field trip Visit field area or company which is related to course material.	-

### 38. Advanced Electromagnetic Method

Module designation	Advanced Electromagnetic Method															
Module level	Master															
Code, if applicable	TG5264															
Sub-heading, if applicable:	-															
Courses included in the module, if applicable:																
Semester(s) in which module is taught	Third Semester / second Year															
Module coordinator(s)	Dr.rer.nat. Wahyudi P Parnadi, MS															
Lecturer(s)	Dr.rer.nat. Wahyudi P Parnadi, MS, Dr.rer.nat. Widodo, ST, MT															
Language	Bahasa Indonesia															
Relation to curriculum	Elective Subject / Elective Course															
Type of teaching, contact hours	<table border="1"> <tr> <td>Class lectures Lecturer teaches students in class. There will be pop quizzes, task, or homework in some classes. Lecturer presents course material using media such as slide in LCD projector and whiteboard.</td> <td>√</td> </tr> <tr> <td>Presentation Students present course materials in front of class using slide in LCD projector, followed by discussion session. After presentation, they make report what they present before.</td> <td>-</td> </tr> <tr> <td>Tutorial session Lecturer gives students some problem beforehand. In class students explain how to solve the problem in groups. Lecturer checks how they solve the problem in turns.</td> <td>-</td> </tr> <tr> <td>Class project and discussion Lecturer gives students a project which related to current issues and course material.</td> <td>√</td> </tr> <tr> <td>Supervision and consultation This activity is continuation of class project. Students consults problem which they face and discuss together how to solve the problem.</td> <td>√</td> </tr> <tr> <td>Practical or experimental laboratory work Students do practical or experimental in the laboratory according to practical module. Firstly, laboratory assistant tell main idea of practical or experimental. They do the practical afterwards.</td> <td>-</td> </tr> <tr> <td>Field trip Visit field area or company which is related to course material.</td> <td>-</td> </tr> </table>		Class lectures Lecturer teaches students in class. There will be pop quizzes, task, or homework in some classes. Lecturer presents course material using media such as slide in LCD projector and whiteboard.	√	Presentation Students present course materials in front of class using slide in LCD projector, followed by discussion session. After presentation, they make report what they present before.	-	Tutorial session Lecturer gives students some problem beforehand. In class students explain how to solve the problem in groups. Lecturer checks how they solve the problem in turns.	-	Class project and discussion Lecturer gives students a project which related to current issues and course material.	√	Supervision and consultation This activity is continuation of class project. Students consults problem which they face and discuss together how to solve the problem.	√	Practical or experimental laboratory work Students do practical or experimental in the laboratory according to practical module. Firstly, laboratory assistant tell main idea of practical or experimental. They do the practical afterwards.	-	Field trip Visit field area or company which is related to course material.	-
Class lectures Lecturer teaches students in class. There will be pop quizzes, task, or homework in some classes. Lecturer presents course material using media such as slide in LCD projector and whiteboard.	√															
Presentation Students present course materials in front of class using slide in LCD projector, followed by discussion session. After presentation, they make report what they present before.	-															
Tutorial session Lecturer gives students some problem beforehand. In class students explain how to solve the problem in groups. Lecturer checks how they solve the problem in turns.	-															
Class project and discussion Lecturer gives students a project which related to current issues and course material.	√															
Supervision and consultation This activity is continuation of class project. Students consults problem which they face and discuss together how to solve the problem.	√															
Practical or experimental laboratory work Students do practical or experimental in the laboratory according to practical module. Firstly, laboratory assistant tell main idea of practical or experimental. They do the practical afterwards.	-															
Field trip Visit field area or company which is related to course material.	-															

Module Handbook

Workload	Class lectures	2 hours					
	Tutorial session	-					
	Supervision and consultation	2 hours					
	Practical or experimental laboratory work	-					
	Individual studies	6 hours					
	Total workload per week	10 hours					
	Presentation	-					
	Class project	80 hours					
	Field trip	-					
	Total workload per semester	160 hours					
Credit points	2
